Guessing The Number

INTRODUCTION

The game "Guessing the number" is literally about guessing the number. The game is suitable for two mature friends to strengthen their relationship without being aimed at two kids. Also, the game "Guessing the number" would be a great source to develop early learning skills for younger children. While guessing the number, children can improve their level of detection ability, intelligence, cognitive, memory, and even critical thinking with given hints. It seems to be a simple game, but it includes a high level of competition between two players and critical thinking.

1. INTRODUCTION

The following subsections of the Software Requirements Specifications (SRS) document provide an overview of the entire SRS.

1.1 DOCUMENT PURPOSE

The purpose of this document is to show the software requirements of the game named "Guessing the number". The functionality and scope of this game are described in this SRS document.

1.2 PRODUCT SCOPE

The game "Guessing the number" aims at helping the user to feel happy and relax. Nowadays people are too busy to make a relationship, but the game can help you to make a relationship while playing the game. It contains the level of competition and achievement. Ultimately, we can expect increases in the level of cognitive, intelligence, and critical thinking. Additionally, the game shows the incredible effectiveness of killing time.

1.3 INTENDED AUDIENCE AND DOCUMENT OVERVIEW

This SRS document is intended for developers, professors, and students for reading. The rest of the document contains the functional and nonfunctional requirements of the game "Guessing the number".

1.4 DEFINITIONS, ACRONYMS AND ABBREVIATIONS

SRS- Software Requirement Specification.

GTS – Guessing The Number

Servers: Machines that store all the information and records.

1.5 DOCUMENT CONVENTIONS

The entire document is in Times New Roman font. The headings are numbered 1,2,3... and so on and sub-headings are numbered x.1,x.2... and so on. Both headings and subheadings are in bold.

Main title: Font Times New Roman and size 36 Subtitles: Font Times New Roman and size 21.5 Content: Font Times New Roman and size 12

2. OVERALL DESCRIPTION

2.1 PRODUCT PERSPECTIVE

The game "Guessing the number" is literally about guessing the number. The game is suitable for two mature friends to strengthen their relationship without being aimed at two kids. Also, the game "Guessing the number" would be a great source to develop early learning skills for younger children. While guessing the number, children can improve their level of detection ability, intelligence, cognitive, memory, and even critical thinking with given hints. It seems to be a simple game, but it includes a high level of competition between two players and critical thinking.

2.2 PRODUCT FUNCTIONALITY

Some major product functionalities of the system are as follows:

- -Information about the process
- -Information about the answer
- -Show whether the number is correct or not

2.3 USERS AND CHARACTERISTICS

Primary users of the system will be employees working in company /students /staff, manager , HOD, Admin. Very little technical expertise is required for reading the outputted data since it is in graphical/tabular form.

Educational level of LMS computer software – Low

Experience of LMS software - None

Technical Expertise – Little

2.4 OPERATING ENVIRONMENT

Google colab

2.5 DESIGN AND IMPLEMENTATION CONSTRAINTS

The design of the game is built in google colab. The design is simple and straight.

2.6 USER DOCUMENTATION

A link is provided for help and a very easy User Interface.

2.7 ASSUMPTIONS AND DEPENDENCIES

Assume that all the information entered by the user will be whether wrong or correct. If any wrong information is found then the system will tell you "the number is wrong" and return the value.

3. SPECIFIC REQUIREMENTS

3.1 External Interface Requirements

Google Colab is used as the interface of the game.

3.2 Functional Requirements

- Take input function
- Function to calculate the hints
- Loops
- Function to reply appropriate message

4. NON-FUNCTIONAL REQUIREMENTS

Non-functional requirements define the needs in terms of performance, availability, maintainability, and bug-free.

4.1 PERFORMANCE REQUIREMENTS

Performance requirements define acceptable response times for system functionality.

- · Fast loading time
- · The system shall consume very little of primary memory

Chapter 2: Feasibility Study ang challenges

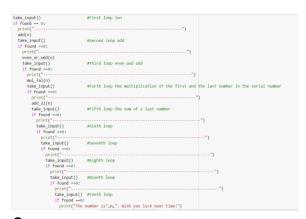

1. Finalized requirement

- The game should have no bugs and run smoothly
- Make the Hint() function

```
def even_or_odd(m):
def add(m):
                                                        global e
global o
  global x
                                                        for i in range(len(str(m))):
    t=m%10
  for i in range(len(str(m))):
                                                         m = m//10
if t%2==1:
    x+=m%10
                                                           0+=1
    m = m//10
  print("The sum of terms is",x)
                                                        print("The number have", o, "odd number",". The number have", e, "even number")
def mul fal(m):
 for i in range(len(str(m))):
   mul_fal_list.append(m%10)
 print("the multiplicaation of the first and the last number is", \\ mul_fal_list[0]*mul_fal_list[-1])
def add 21(m):
 for i in range(len(str(m))):
    add_2l_list.append(m%10)
    m = m//10
 print("the sum of two last numbers is", add_2l_list[0] + add_2l_list[1])
```

Make the Take Input() function

- Make the main loop

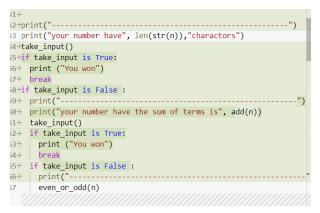

2. Challenges encountered

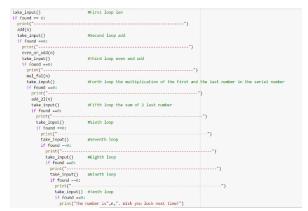

- Global and Local variable challenge (Decide variable should be Local or Global for the code to work).

- Global and Local challenge can be solved by understand the main purpose of the variable and their continuity to use or reuse in the code.

The number have 4 odd number . The number have 1 even number
                                                                                                     The number have 4 odd number . The number have 1 even number
Enter your guess: 13572
                                                                                                     Enter your guess: 13572
You have 1 number in the correct position
You have 0 number in the correct position
You have 7 more guess
                                                                                                     You have 7 more guess
the multiplicaation of the first and the last number is 18
                                                                                                     the multiplicaation of the first and the last number is 18
Enter your guess: 99132
You have 0 number in the correct position
                                                                                                     Enter your guess: 91132
You have 2 number in the correct position
You have 6 more guess
                                                                                                     You have 6 more guess
the sum of two last numbers is 10
                                                                                                     the sum of two last numbers is 10
Enter your guess: 23119
You have 0 number in the correct position
                                                                                                     Enter your guess: 23119
You have 1 number in the correct position
You have 5 more guess
                                                                                                     You have 5 more guess
Enter your guess: 61173
You won in 6 guesses
                                                                                                    Enter your guess: 61173
You won in 6 guesses
```

- Loop challenge. Python does not understand which function is true or false.
- Loop challenge can be solved by declared a variable represents for the true and false statement and after each loop the variable may change

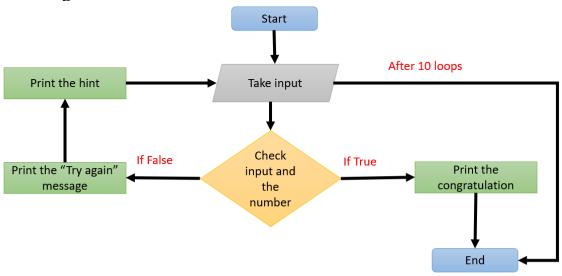

- Wrong hint challenge.
- Wrong hint challenge can be solve by testing and rechecking the code.

Chapter 3: Design diagrams

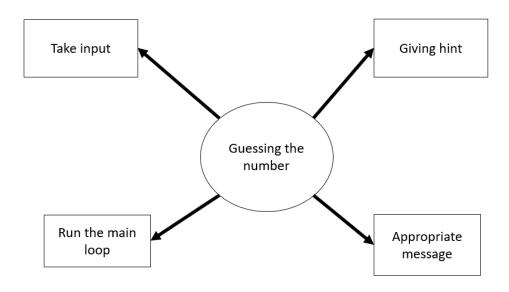

Flowchart diagram

Start the program => Taking input from the user => put the in put into a loop

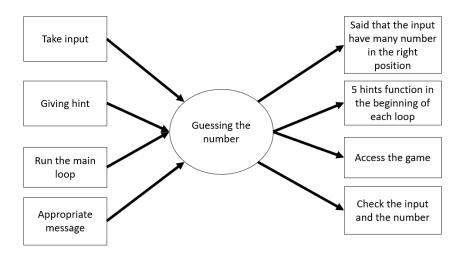

- \Rightarrow If true print the congratulation message => End the program
- \Rightarrow If False return into the loop => After 10 loops => End the program

DFD diagram

Zero level DFD – Guessing the number

Zero level DFD have 4 categories is Take input, Giving hint, Run the main loop, and Appropriate message

First level DFD – Guessing the number

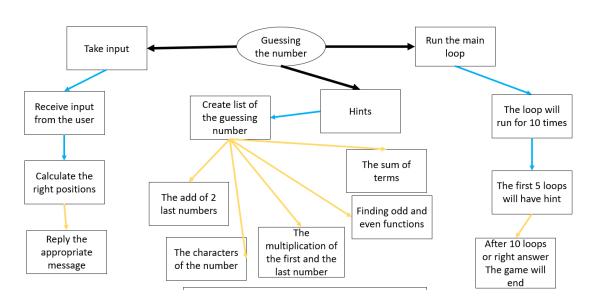

First level DFD have more function about each category

Take input => reply the hint message

Giving hint => reply 5 hints

Run the main loop => Access the game

Appropriate message => Check and reply the message

Second level DFD – Guessing the number

It contains more function and step

Take input => Function to calculate the position of the number => reply message

Hints => Compare the input number with the guessing number

The main loop => Access the game and rules

Chapter 4: Code implementation

1. Python concept

- Game

2. Functions and libraries

2.1 Function

- print()

```
- len()
Hint functions:
- add() - the sum of terms

def add(m):
    global x
    for i in range(len(str(m))):
        x+=m%10
        m = m//10
    print("The sum of terms is",x)
```

- $even_or_odd()$ – find the number of even and odd number

```
def even_or_odd(m):
    global e
    global o
    for i in range(len(str(m))):
        t=m%10
        m = m//10
        if t%2==1:
        o+=1
        else:
        e+=1
    print("The number have", o, "odd number",". The number have", e,"even number")
```

- mul_fal() – find the multiplication of the first and the last numbers

```
def mul_fal(m):
    for i in range(len(str(m))):
        mul_fal_list.append(m%10)
        m = m//10
    print("the multiplicaation of the first and the last number is", mul_fal_list[0]*mul_fal_list[-1])
```

- add_21()

```
def add_21(m):
    for i in range(len(str(m))):
        add_21_list.append(m%10)
        m = m//10
    print("the sum of two last numbers is", add_21_list[0] + add_21_list[1])
```

- Take_input() – take input and compare them with the guessing number

```
found=0
def take input():
  input sn list=[]
  a=0
  global y
  global found
  ca=input_number=int(input("Enter your guess: ")) #Take input
  m=10-y
  for u in range(len(str(input_number))):
                                                        #Create list of input
    input sn list.append(ca%10)
    ca = ca//10
  for i in range(g):
    for u in range(len(str(input number))):
                                                        #Reply appropriate message
      if number list[i]==input sn list[u]:
       if i == u:
          a+=1
  if input number == n:
                                                        #Reply answer
    print("You won in", y, "guesses")
    found=1
  else:
    print("You have",a,"number in the correct position")
    print("You have",m,"more guess")
    found=0
```

2.2 Libraries

- Random

```
from random import randint
n = randint(1000,100000)
```

CHAPTER 5: TESTING

```
#Create random number

from random import randint
n = randint(1000,100000)
```

- set the range of given random number in case the number is too b ig to guess it

```
q=n
x=0
y=0
e=0
o=0
t=0
```

- declare various variables to organize the code without any error

```
m=10-y
for u in range(len(str(input_number))):
                                                       #Create list of input
 input_sn_list.append(ca%10)
  ca = ca//10
for i in range(g):
  for u in range(len(str(input_number))):
                                                       #Reply appropriate messa
    if number_list[i]==input_sn_list[u]:
      if i == u:
        a+=1
                                                       #Reply answer
if input number == n:
  print("You won in", y, "guesses")
  found=1
else:
  print("You have",a,"number in the correct position")
  print("You have",m,"more guess")
  found=0
```

- In case the player can play the game with out any limits, set the limit of shots.

```
#Hint 1:
def add(m):
 global x
 for i in range(len(str(m))):
   x+=m%10
   m = m//10
 print("The sum of terms is",x)
#Hint 2:
def even_or_odd(m):
 global e
 global o
 for i in range(len(str(m))):
   t=m%10
   m = m//10
   if t%2==1:
   else:
 print("The number have", o, "odd number",". The number have", e, "even number")
#Hint 3:
def mul fal(m):
 for i in range(len(str(m))):
   mul_fal_list.append(m%10)
 print("the multiplicaation of the first and the last number is", mul_fal_list[0]*mul_fal_list
#Hint 4:
def add 21(m):
 for i in range(len(str(m))):
   add_21_list.append(m%10)
   m = m//10
 print("the sum of two last numbers is", add_21_list[0] + add_21_list[1])
```

- Given hints, could be possible to guess the number within shots.

```
your number have 5 charactors
Enter your guess; 39213
You have 1 number in the correct position
You have 5 more guess
The sum of terms is 21
Enter your guess; 13833
You have 0 number in the correct position
You have 8 more guess
The number have 1 odd number. The number have 4 even number
Enter your guess; 14714
You have 1 number in the correct position
You have 8 more guess
The number have 1 odd number. The number have 4 even number
Enter your guess; 14714
You have 1 number in the correct position
You have 6 more guess
The sum of two last numbers is 8
Enter your guess; 14721
You have 1 number in the correct position
You have 5 more guess
Enter your guess; 39218
Finter your guess; 39283
You have 1 number in the correct position
You have 6 more guess
Enter your guess; 30218
Finter your guess; 30218
You have 1 number in the correct position
You have 8 more guess
Enter your guess; 39214
You have 1 number in the correct position
You have 2 more guess
Enter your guess; 39214
You have 1 number in the correct position
You have 2 more guess
Enter your guess; 30214
You have 1 number in the correct position
You have 2 more guess
Enter your guess; 30214
You have 1 number in the correct position
You have 2 more guess
Enter your guess; 30214
You have 1 number in the correct position
You have 2 more guess
Enter your guess; 30214
You have 1 number in the correct position
You have 0 number in the correct position
```

Diagram: output when we are out of 10 guess chancees

Chapter 6: Help guide

How to run(play) our code?

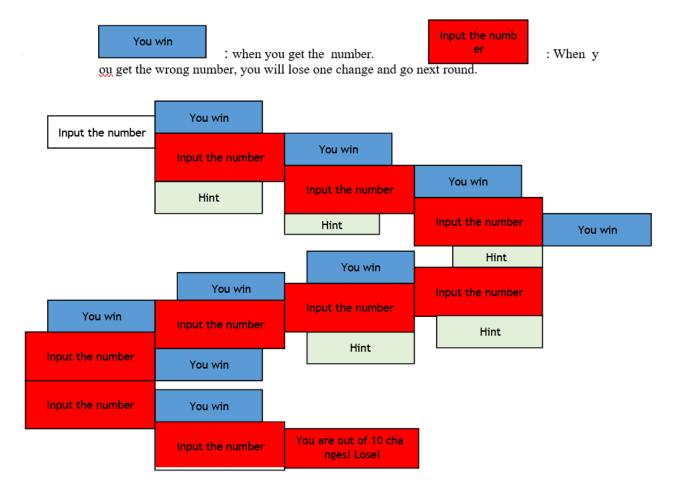

- Our product 'Guessing The Number" is basically a fun educational game that challenges kids to find a number based on hints and given feedback. Therefor e, since the guideline is given, what players have to do is to input the numbe r(guess) based on the guideline. Player's guessing chances are limited as 10.

Can We Play Together?

'Guessing The Number' can be played with your friends or even your parents. Rather, We are looking forward to playing together.

The Program Flow

Basically the code will not end until you got the number. But if you are out of 10 chances, you will lose. Also, as we proceed, hints are given (not more than 5). Below is the basic process of the program

CHAPTER 7: CONCLUSION

What have we achieved?

- What we aimed at is to make a game which can be played by all ages, especially university students or businessmen. Nowadays, people are too busy to do something else even without being businessmen or university students. People only care about their businesses. It seems that all of those are so overwhelmed by so many things. So, the ultimate purpose of the game is that it can be played anytime for a while. We are delighted that it seems "Guessing The Number" is able to make it.
- When we came up with the idea, we thought that the code would be really easy and simple. However, the code was complex and harder than we thought it would be. But we were able to make the perfect code to implement it. We've handled edge cases, errors, and etc. We believe that what we did itself(making the game) was in the sense of achievement.

What have we not achieved?

- We originally wanted to make the game in a sort of software including the button and the fancy design. But the problem is that we do not have enough technology and knowledge to handle them. So, we had decided just to make it as a python code. But we believe that one day we are able to make it once we've learned the software.

Final Project Report Rubrics

Demonstrates limited understanding of python programming and software development in the report.	Achievement category	Marks Given	50–59% (Level 1)	60-69% (Level 2)	70–79% (Level 3)	80–100% (Level 4)
